BASIC-ABSTRACT:

Method of manufacturing, double sided adhesive tape of which the two faces have different adhesive properties for reversibility.

Tape comprises synthetic separated by a covering film. When this is removed from the roll, the less adhesive face is applied to the smooth surface while the other face remains firmly bonded to the other surface. To enable the cover foil to be easily removed, a narrow (2-3 mm) edge of the tape is provided with no adhesive.

The two objects (surfaces) may be repeatedly separated and reunited. Flaps for envelopes contng. free samples, specimens etc. (for posting) and bags and containers.

ABSTRACTED-PUB-NO: JP61023673A

BASIC-ABSTRACT:

The double-sided adhesive tape or sheet has an adhesive layer one side of which has polyether having at least one reactive silane gp. in the molecule, a tackifier and a crosslinking agent and an adhesive layer on the other side is different.

Pref. adhesive layer on the other side consists of acrylic resin or rubber-based adhesive. The polyether should pref. contain silane gp. on both terminals of main chain and have mol. wt. of 300-15,000, esp. 1,000-10,000. The tackifier includes terpene phenol resin, hydrogenated rosin glycerine ester, coumarone resin, etc.

ADVANTAGE - The double-sided adhesive tape or sheet has high adhesive strength on both sides at room temp. and upon heating, difference in adhesive strength between the two layers becomes greater. It is suitable for fixing mirror, glass, lens, etc. on to a polishing stand.
